

Taurus Software
Making Data Liquid

Taurus Software
AS/400 Release
June 23, 2008

FOR IMMEDIATE RELEASE

Taurus DataBridger to support IBM AS/400 platform with real-time data movement.

Redwood City, Calif. – Taurus Software announced that its DataBridger tool now provides compatibility and support for the IBM AS/400 (IBM System i) platform. As a result, IBM AS/400 users have the ability to solve crucial data migration issues that include:

- Moving data real-time between applications and data repositories
- Synchronizing information throughout the enterprise
- Providing incremental real-time updates to enterprise data structures
- Exchanging data with external company sites or suppliers
- Migrating data easily between different databases and platforms

“In today’s complex computing environment that increasingly demands users adopt emerging technologies, while at the same time leveraging their investments in existing systems, DataBridger is instrumental,” said Cailean Sherman, President of Taurus Software. “This robust open-platform tool facilitates the ability to extract, transform and load (ETL) tasks for data warehouse

building, as well as data integration and synchronization across multiple servers.”

DataBridger offers database support for any ODBC-compliant database, including Oracle, DB2 and SQL Server, to name a few. It adds its support of the AS/400 platform to support for Unix, Linux, Windows, and MPE operating systems.

About Taurus Software

Since 1987, Taurus Software has been “Making Data Liquid” by offering an entire range of solutions that include: DataBridger, application-specific data models, and Analysis Suite, a powerful analytical and reporting toolset. Taurus is a member of the HP e3000 Transition Partners Program and has technology partnerships with DirectTech, Quest Software, Lund Performance Solutions, Escalate Retail, Orbit Software, Pathway Pacific, DST Health Solutions and Acumium.

About IBM AS/400

The IBM AS/400 platform was introduced in 1998 and was recently rebranded as the IBM System i. The platform represents IBM’s midrange offering – between the mainframe and PC. The IBM AS/400 remains attractive to executives and end-users due to its structural design, which continues to accommodate implementation of faster processors and its applications, which are able to run without alteration on any model within the product line.
